## Delivery Medium

- Chrome Browser Extension
- AI reads workday page
- AI compares completed classes against correct flowchart
- AI spits out document with results
  - ↳ Does it create a downloadable pdf
  - ↳ Does it just put the output in a GUI on the screen

## Tools

- Google Collab to host code for the AI
- A dataset of some kind
- Python
- Ollama
  - ↳ Fine tune a small model from here
  - ↳ Use UnSloth to fine tune a model

## Parameters:

- Just do the regular concentrations
- Don't worry about minors, double majors, and second discipline

## Questions:

Questions:

- Do we want multiple specialized models?
  - ↳ One model to read workday (web scraping)
  - ↳ One model to read pdf
  - ↳ One model to coordinate the other two's findings
- Do we want one bigger model?
  - ↳ Might save space overall
  - ↳ Might take longer to train
  - ↳ Might be less accurate
- What will our output look like?
  - ↳ How will it be formatted
- Ollama vs llama.cpp?
  - ↳ llama.cpp is faster
  - ↳ Both have web interfaces
    - ↳ Could use this for debugging

Meeting Notes:

Orchestrator

Agent Agent Agent

- Convert flowchart to a graph
  - ↳ Has nodes like a linked list → Nodes are classes
  - ↳ Nodes connected to other nodes
  - ↳ The graph is a JSON file
- Agent SDK → Google Framework
- → Vector database RAG
- → Don't reinvent the wheel
- → Plugin uses LSU login
  - ↳ Talk to ITS
- → GLM 4.7 fast
  - ↳ Really fast and good
- → GPT-OSS
  - ↳ More accurate sometimes
- → Make specialized agents
  - ↳ No single cycle agents
  - ↳ Response-Action Model
- → MCP
- → System prompts need to be clear
  - ↳ Implement guard rails
- → Burpsuite output
- → Context Engineering
  - ↳ Preserve the metadata while it's running
